

Age and Morbidity Amidst COVID-19

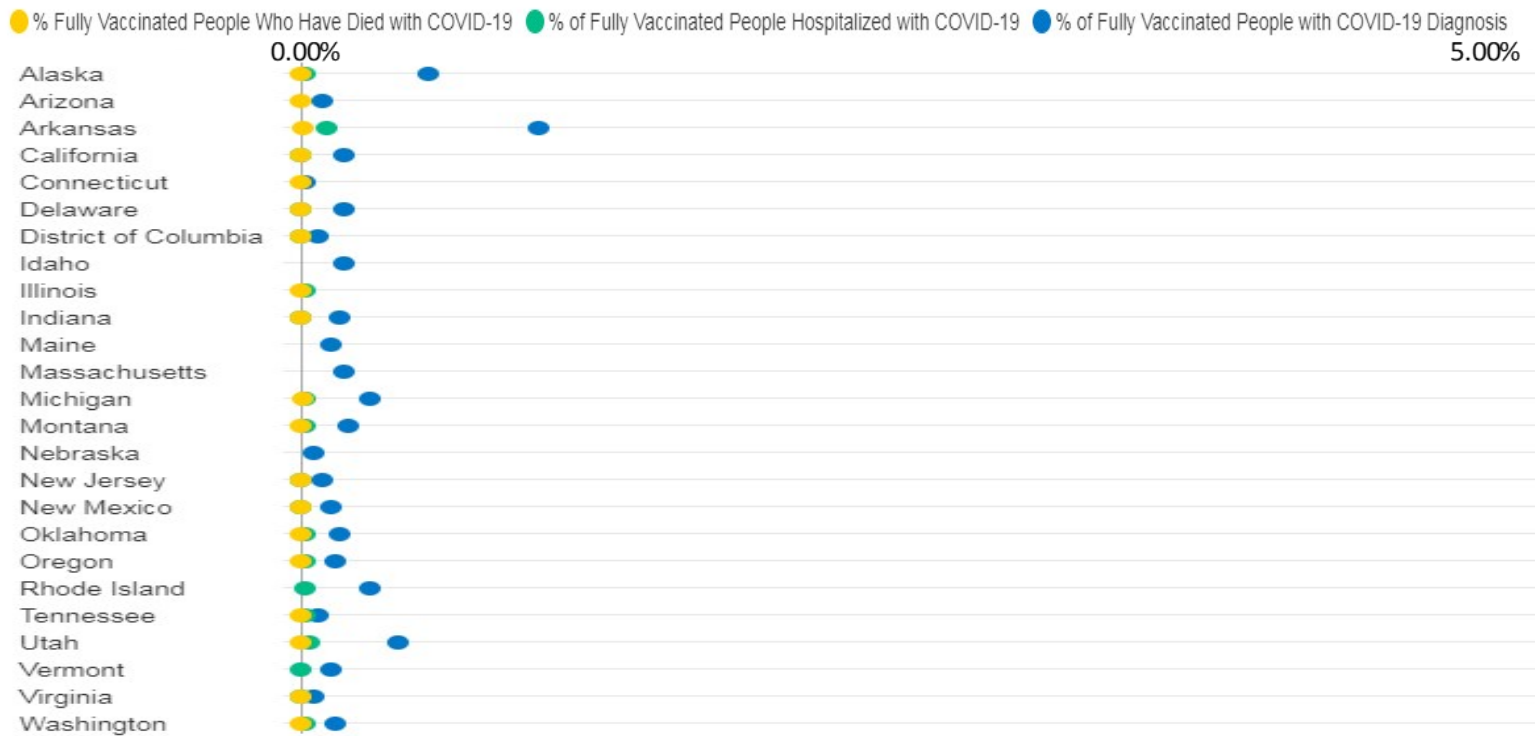

Dr. Vijaya Khairkar

Associate Professor, Department of Geography, SPPU

Percent of Fully Vaccinated Individuals That Have Experienced a COVID-19 Breakthrough Event

Events include COVID-19 diagnoses, hospitalizations, and deaths.

The age wise mortality due to COVID—19 shows more deaths among older age groups. In India, more deaths have occurred above the age bracket of 45 years. The data shows this age group is older than 70 years in Italy, England and USA. However, as people are getting vaccinated, the number of deaths due to COVID-19 has decreased to a great extent.
